                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EST 14-MAR-2001
Ingolstaedter Landstr.1, D-85764 Neuherberg, Germany
This is the 5' sequence of the clone insert. Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKPZ);
Bmail s.wiemanngekfz-heidelberg.de; sequenced by Medigenomix
(Martinsried/Germany) within the CDNA sequencing consortium of the
German Genome Project. This clone (DKPZp669C2337) is available at
the READ Deutsches Resourcentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp469C2337
Further information about the clone and the sequencing project is
available at http://mips.gsf.de/projects/cdna/.

                                                                                                                                                                                                                                                                         The present sequence is a human Nogo protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The human Nogo sequence was derived by aligning human expressed sequence tags (ESTS) e.g. AA156616, AA313267, AA081783, AA167765, AA322918, AA092565, AA081525 and AA081840 with the rar Nogo sequence. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

Human; Nogo receptor; axonal growth; immunogen; antibody; nogo protein; cranial trauma; cerebral trauma; spinal cord injury; stroke; demyelinating disease; multiple sclerosis; monophasis demyelination; encephalowyelitis; multifocal leukoencephalopathy; panencephalitis; Marchiafava-Bignami disease; pontine myelinolysis; adrenoleukodystrophy; Pelizaeus-Merzbacher disease; Spongy degeneration; Alexander's disease; Canavan's disease; metachromatic leukodystrophy; viral infection;

Homo sapiens

```
The sequence is the human Nogo protein, a 250kDa myelin-associated axon nogo protein, their nucleic acide, vectors expressing them and antibodies against them, to isolate acide, vectors expressing them and antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of cranial or cerebral frommas, spinal cord injury, stroke or a demyelinating disease selected from multiple sclerosis, monophasis demyelination, encephalomyelitis, multifocal leukoencephalopathy, panencephalitis, Marchiafava-Bigmami disease, pontine myelinolysis, adernoleukodystrophy, Pelizaeus-Merzbacher disease, Spongy degeneration, Alexander's disease, Canavan's disease, metachromatic leukodystrophy, viral infection and Krabbe's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel Nogo receptor protein useful for identifying modulator of Nogo protein or Nogo receptor protein, which is useful for treating central nervous system disorders.
                                                                                                                                                                                                                                                  This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polymucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under moderately stringent conditions; (e) sequences having at least 75 configuous contiguous; (c) appearance variants of (a). Polymeptides (ABF68596-ABF68597) encoded by (I) and oligonucleotide can be used to detect cancer in a patient and compositions comprising polymeptides, polymucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polymeptide are useful in treating pancreatic cancer and stimulating an immune response. The polymucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour peparation of ribozyme molecules for inhibiting expression of the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

```
The invention relates to a novel nucleic acid encoding a polypeptide comprising amino acid residues 27-309 of a 473 amino acid sequence (PI, human Nogo receptor (NGR) NTLRCT domain), or residues 27-309 of PI with 1-20 conservative amino acid substitutions, and less than a complete CTS domain, provided that a partial CTS domain, if present, consists of no more than the first 39 consecutive residues. The nucleic acid of the in yention has neuroprotective activity. The polynucleotide may have a use in gene therapy. The nucleic acid is useful for decreasing inhibition of axonal growth by a central nervous system (CNS) neuron. The NgR poptide or an agent inhibite the binding of Nogo to NgR or NgR poptide or an agent inhibite the binding of Nogo to NgR or NgR copendent signal transduction in the central nervous system injury, e.g. spinal cord injury. Expression of an NgR protein may be associated with trauma, stroke or a demyelinating disease, such as multiple sclerosis, monophasic demyelination, encephalomyelitis, woultifocal
                                                                                                                                                                                                                                                                                       Human, Nogo receptor; NgR; CTS domain; neuroprotective; gene therapy, axonal growth; central nervous system; CNS; Nogo; spinal cord injury; cranial trauma; spinal trauma; spinal trauma; stroke; Krabbe's disease; demyelinating disease; multiple sclerosis; monophasic demyelination; encephalomyelitis; multifocal leukoencephalopathy; panencephalitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     leukcencephalopathy, panencephalitis, or Krabbe's disease. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human Nogo receptor polypeptides and nucleic acids, useful for decreasing inhibition of axonal growth by a central nervous system neuron, or in treating central nervous system disease, disorder or injury, e.g. spinal cord injury.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described. (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule may a carrier or diluent; and (5) treating the binding molecule and a carrier. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence represents human NogoA, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGLSAAPVPTAPAAGAPLMDFGNDFVPPAPRGPLPAAPPVAPERQPSWDPSPVSSTVPAP 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New binding molecule that binds to the human NogoA polypeptide, NiG, NiG-D20 or NogoA623-640, useful in preparing a composition for treating CNS injury or neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                binding molecule; human; NogoA; NiG; NiG-D20; NogoA_623-640;
nerve repair; neuroprotective; gene therapy;
central nervous system injury; CNS injury; neurodegenerative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLOQSPLVSSSDSPPRPQPAFKYQFVREPEDEEEEEEEEEEEDEDEDLEELEVLERKPA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleoitde is also useful for chromosome localization and for tissue expression studies. The present sequence represents the human MAGI protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 227 LSAASFKEHEYLGNLSTVLPTEGTLQENVSEASKEVSEKAKTLLIDRDLTEFSELEYSEM 286

                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of human NOGO-A. NOGO-A is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel splice variant, NOGO-C (see AAB82348). It provides NOGO-C polypeptides and polymucleotides, and methods for producing such polypeptides by.recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polymucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheiner's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agolists and agonists for use in treating conditions associated with NOGO-C imbalance, and disgnostic assays for detecting diseases associated with inappropriate NOGO-C activity or levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
